                  LOPEZ-LARREA C.;
IMMUNOGENETICS 43:261-267(1996).

I-FUNCTION: RECEPPOR TO INTERLEUKIN-8, WHICH IS A POWERFUL
NEUTROPHILS CHEWOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR
CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA A
G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND
MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY
AND TO MGSA (GRO) WITH A LOW AFFINITY.

                                                              IMMUNOCENETICS 43:261-267(1996).

-!- FUNCTION: RECEPTOR TO INTERLEUKIN-8, WHICH IS A POWERFUL NEUTROPHILS. CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR CAUSES ACTIVATION OF BUTTOPHILS. THIS RESPONSE IS MEDIATED VIA A G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN COUPLED RECEPTORS. EMBL. X91111; -; NOTANNOTATED_CDS.
PROSITE; PSO00237; G_PROTEIN RECEPTOR; 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       320
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    261

-!- FUNCTION: RECEPTOR TO INTERLECKIN-8, WHICH IS A POWERFUL
NEUTROPHILS CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR
CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA A
G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND
MESSENGER SYSTEM.
                                          ILBRA OR CXCRI.

```
IMMUNOGENETICS 43:261-267(1996).

-! FUNCTION: RECEPTOR TO INTERLEUKIN-8, WHICH IS A POWERFUL NEUTROPHILS. CHEMOTACTIC FACTOR. BINNING OF IL-8 TO THE RECEPTOR CAUSES ACTIVATION OF PURPOSHILS. THIS RESPONSE IS MEDIATED VIA A G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY.

-! SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-! SUBLIBRATIX: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

-I- FUNCTION: RECEPTOR TO INTERLEUKIN-8, WHICH IS A POWERFUL

NEUTROPHILS CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR

CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA A
G-PROTEIN THAY ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND

MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY.

AND TO GRO/MOSA AND NAP-2 ALSO WITH A HIGH AFFINITY.

CHICARACTERISTIC FAMILY I OF G-PROTEIN COUPLED RECEPTORS.
